

Calvetti receives prestigious SEAoT Award

The Structural Engineers Association of Texas (SEAoT) has presented the Wilbur C. Schoeller Award to Lawrence Calvetti, P.E., president of WSC, Inc. The Award is presented to a member for specific achievement or attainment of noteworthy prominence in the structural engineering profession.

Originally from the Black Hills region of western South Dakota, the first-generation Italian-American is a graduate of the University of Texas and holds a B.S. and an M.S. in Architectural Engineering. During the course of his 30-year career, he worked for Austin-based W. Clark Craig & Associates and designed several multi-story hotel structures throughout the U.S. Moving to San Antonio in 1975, Lawrence started a successful professional consulting practice, and later became a partner with Williams and Schneider, Inc. in 1983. He has helped direct the organization as president of the new corporation, WSC, Inc.

During the past 19 years, Lawrence has been actively involved in the restoration and renovation of historical structures within the City of San Antonio and in neighboring communities.

A member of numerous professional organizations, associations and societies, the presentation of the SEAoT Wilbur C. Schoeller Award to Lawrence came as a complete surprise to him.

"I didn't know until my partner stood up and started talking about me. They managed to keep it a surprise, and I was quite humbled. This was the third award of its nature given in the last three years, and the previous recipients were more world renowned than I. However, I do my best, I feel I'm a good engineer, and I try to help people as best I can. I'm proud to be a structural engineer, and I am thankful to SEAoT and Texas. They both have been very, very good for me."
